Salient Features

- 1. Forged body construction.
- 2. Disc and Seat lapped to minimize steam leakage.
- 2. Condensate entry below the disc concentric to disc/ seat ensures parallel lift of disc with reference to seat, eliminating any localised wear and tear.
- 4. Trap is designed to take care of lower condensate flow rates in steam iron applications.

Installation

Horizontal, as shown. Arrow on the body indicates direction of flow.

Maintenance

Before attempting maintenance of the trap, ensure steam is vented to avoid injury. If the disc and body seating surfaces are only slightly worn, they can be refaced by lapping.

Use 400 grit emery paper. Place it on a flat surface like plate or glass and lap seat face in a motion of '8'. Then Lap disc with body seat face. Clean thoroughly.

When reassembling, the disc is placed in position with grooved side in contact with the body seating face (refer figure)
